

CONSOLIDATED CONSUMER PRICE INDEX (CPI) FOR THE REPUBLIC OF UZBEKISTAN

Consumer Price Index (CPI), acting as the main indicator of inflationary processes in the consumer sector, it is one of the key indicators for assessing the socio-economic state of the country.

CONSOLIDATED CPI FOR JULY, %

to the previous month

In July 2023, the consolidated CPI for the month amounted to **99.8%**, by December 2022 - **103.3%**. The average monthly increase in the CPI for January-July this year reached **0.5%**.

to December of the previous year

In annual terms (compared to July of the previous year), the consolidated CPI was fixed at **108.9%**.

Average monthly growth for January-July, %

CONSOLIDATED CPI WORLDWIDE

Harmonized CPI in selected EU countries for June 2023,
increase (decrease) in %¹

Composite CPI in selected countries for June 2023,
increase (decrease) in %²

¹) https://ec.europa.eu/eurostat/databrowser/view/PRC_HICP_MANR__custom_3761882/bookmark/table?lang=en&bookmarkId=4ad27e6f-358a-4a3d-82a0-587d69a833eb

²) according to the official websites of the statistical services of these countries.

CPI in one form or another is calculated in most countries of the world, including neighboring countries.

Within the EU, in addition to national ones, harmonized CPIs are published, which are calculated according to harmonized definitions and therefore represent a good statistical basis for international comparisons of consumer inflation across the European Union.

In our republic, the calculation of the CPI has been introduced since 1994 with the technical assistance of the IMF. The basis for its compilation is the Methodological Provisions for Organizing Monitoring of Consumer Prices (Tariffs) for Goods and Services and Calculating Consumer Price Indices (approved in a new edition by State Statistics Committee Resolution No. 33 of September 27, 2022), which were developed taking into account the recommendations of the consumer prices: Theories and practices” (IMF, OECD, Eurostat, UNECE, World Bank and ILO) <https://lib.stat.uz>.

CPI FOR GOODS AND SERVICES FOR JULY, %

In July 2023, the CPI for goods for the month was **99.7%**, services - **100.5%**. Since the beginning of this year, this indicator for goods has reached **103.3%**, services - **103.4%**. In annual terms, it was formed, respectively, at the levels of **109.2%** and **108.2%**.

GOODS

to the previous month

to December of previous year

to July of previous year

SERVICES

to the previous month

to December of previous year

to July of previous year

According to the approved methodology, price registration is carried out monthly from the **10th** to the **20th**. The data collection is organized in such a way that the price registration in this time period for each position is carried out once, and the interval between registrations for adjacent periods is one calendar month. When calculating the CPI, the influence of assortment and territorial shifts is excluded in order to identify only inflationary factors.

CPI FOR MAIN GROUPS OF GOODS AND SERVICES, %

Total **510**

The entire set of goods and services for monitoring price changes, consisting of **510 items**, is divided into three large groups.

170

250

90

● food products

● non-food products

● services

July to the previous month

July to December of the previous year

July to July of the previous year

The short-term CPI for food products in July this year amounted to **99.1%**, non-food products - **100.3%**, paid services - **100.5%**. CPI by December last year for food products was fixed at **103.1%**, non-food products - **103.4%**, paid services - **103.4%**. CPI in annual terms for food and non-food products was at the level of **110.7%** and **107.3%**, for services it reached **108.2%**.

CPI FOR MAIN GROUPS OF GOODS AND SERVICES FOR JANUARY-JULY 2023, %

FOOD PRODUCTS

Over **10,000** retail outlets and paid services are surveyed every month as part of monitoring changes in consumer prices, and more than **120,000** price quotations are recorded.

NON-FOOD PRODUCTS

The short-term CPI for food products in July 2023 was formed under the influence of a number of factors, among which seasonality stands out. Due to the saturation of the market with products of the new harvest, a decrease in prices for certain types of fruit and vegetable products is fixed, and, as a result, this is reflected in the CPI level for food products.

SERVICES

The annual CPI for food products during the seven months of this year fell from 115.4% in January to 110.7% in July. The decrease in this indicator for non-food products and services was less pronounced.

- to the previous month
- to December of the previous year
- to the corresponding month of the previous year

CPI EXCLUDING FRUIT AND VEGETABLES, %

July

CONSOLIDATED CPI

FOOD PRODUCTS

to the previous month

to December of the previous year

to July of previous year

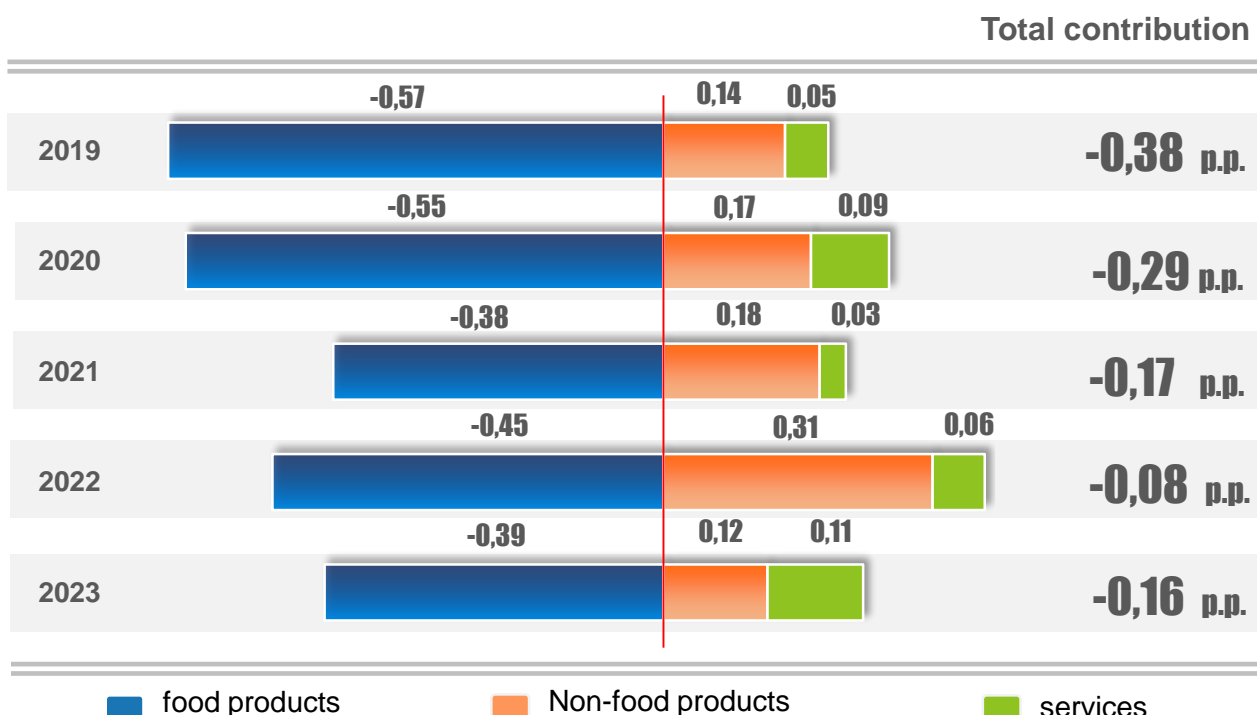

Excluding changes in prices for fruits and vegetables, the short-term consolidated CPI for July 2023 was **100.1%**.

By the level of December 2022, this indicator is fixed at around **103.7%**, July 2022 - **109.0%**.

STRUCTURE OF THE CONTRIBUTION OF PRICE CHANGES FOR THE MAIN GROUPS TO THE GROWTH OF THE CONSOLIDATED CPI, p.p.*

July to the previous month

The decline in food prices allowed the consolidated CPI for the month to drop by **0.39 percentage points**.

Price changes for non-food products and paid services to the population increased the total indicator by **0.23 percentage points** in total.

The calculation of the CPI is based on the following two data sources:

1) information about the structure of household expenditures (data from sample surveys of households), which serve as the basis for the formation of specific weights;

2) information on price changes for a selective range of territories, objects of trade and services, as well as representative goods.

Thus, the share and contribution of each position (section, group, specific product or service) to the change in the summary indicator is evaluated taking into account price changes and the share of the position in the cost structure.

*) percentage points

STRUCTURE OF THE CONTRIBUTION OF PRICE CHANGES FOR THE MAIN GROUPS TO THE GROWTH OF THE COMPOSITE CPI

Contribution, p.p.

Share in the total contribution, %

July to December of the previous year

July to July of the previous year

■ food products

■ non-food products

■ services

Food products accounted for over **40%** of the total contribution of the three main groups to the growth of the consolidated CPI by December 2022 (against **50.9%** a year earlier). The contribution of price changes for services was the smallest among the three main groups - its share was **23.7%**.

The increase in the consolidated CPI in annual terms by more than half is associated with an increase in prices for food products (**50.8%**).

CPI BY COICOP SECTIONS RUz 2018, %

Since January 2021, the State Statistics Committee (now the Statistics Agency under the President of the Republic of Uzbekistan) was the first among the CIS countries to completely switch to the formation of the CPI based on the Classification of Individual Consumption According to Purposes 2018 (COICOP RUz 2018), which is based on the UN international standard - Classification of Individual Consumption According to Purpose (COICOP) 2018. COICOP RUz 2018 is intended for use in the field of statistical activity and provides for the grouping of household consumption expenditures into 13 sections.

CPI FOR CERTAIN TYPES OF FRUIT AND VEGETABLE PRODUCTS FOR JULY 2023,%

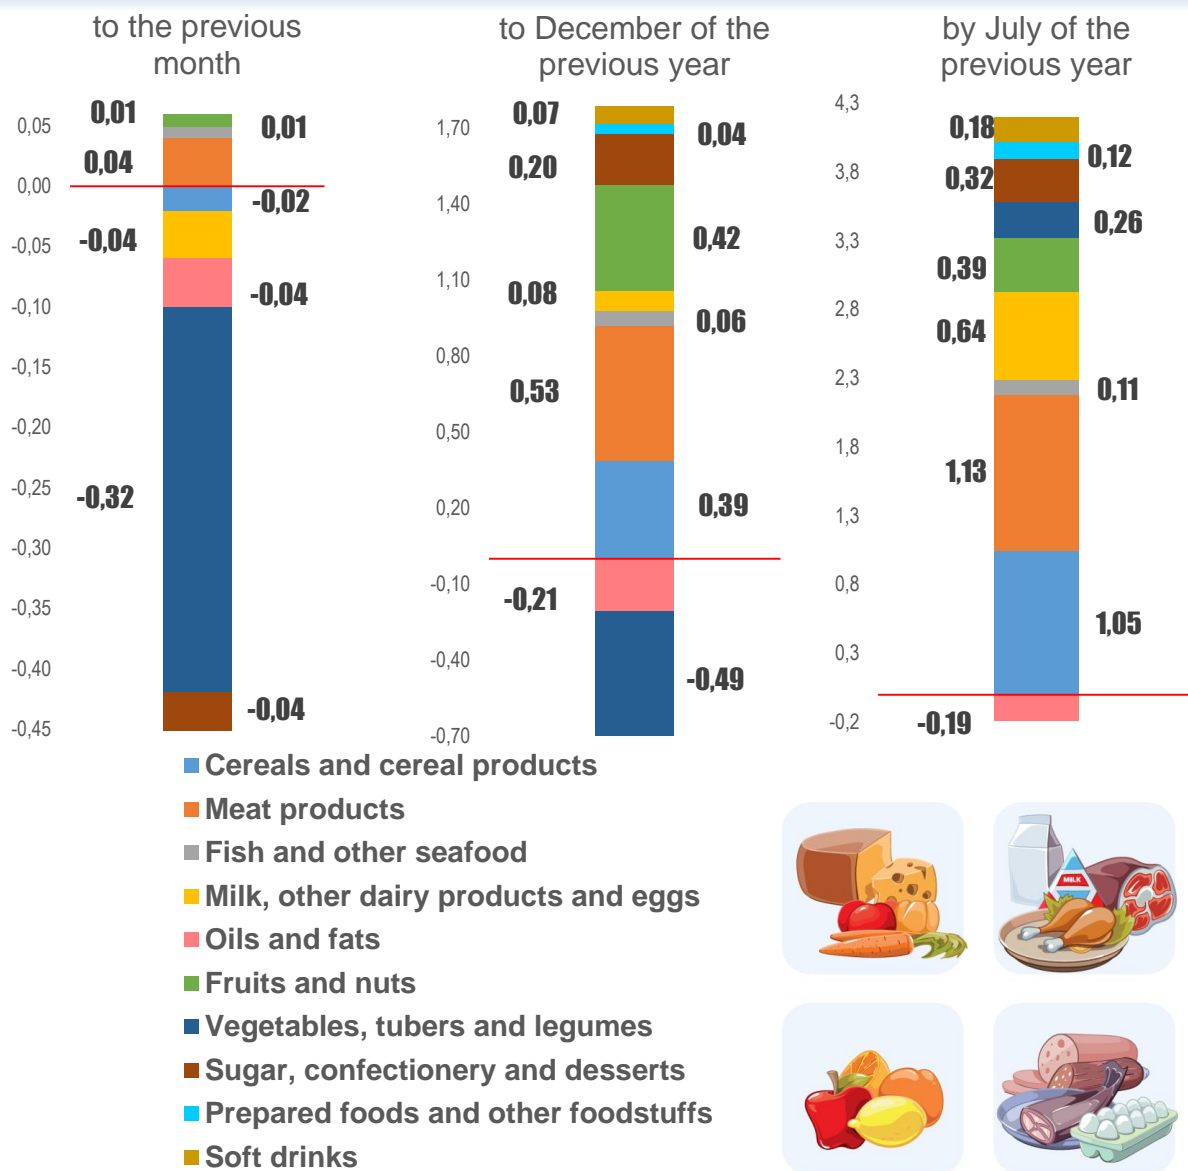

■ goods with increase in prices
■ goods with decrease in prices

In July of this year, there was a decrease in prices for a number of vegetables. The short-term CPI range for declining goods ranged from **62.4%** (eggplants) to **96.1%** (bananas).

Compared to December 2022, prices for cucumbers decreased most significantly among the observed types of fruit and vegetable products. Bell pepper was the commodity with the lowest CPI in annual terms.

CONTRIBUTION TO THE GROWTH (DECREASE) OF THE CONSOLIDATED CPI OF PRICE CHANGES FOR MAIN FOOD GROUPS AND SOFT DRINKS FOR JULY 2023, p.p.

In total, due to a decrease in prices for vegetables, tubers and legumes, sugar, confectionery and desserts, cereals and cereals, oils and fats, milk, dairy products and eggs, the short-term consolidated CPI in July of this year became lower by **0.46** percentage points. P. The inflationary factor was the growth in prices for meat products, fish and seafood, fruits and nuts, due to which the consolidated indicator increased **by 0.06** percentage points.

In the structure of the growth of the consolidated CPI by December 2022, a significant contribution belongs to meat products (**+0.53 p.p.**), fruits and nuts (**+0.42 p.p.**), as well as sugar, confectionery and desserts (**+0.20 p.p.**). The decline in prices for oil and fat products, as well as for vegetables, tubers and legumes led to a decrease in the consolidated CPI by **0.70** percentage points.

In July this year, the price situation in the observed insurance services market remained stable.

Among financial services, price changes were noted only for money

transfer services through banks, where the short-term CPI in July of this year amounted to **100,9%**.

SECTION XIII. "HOUSEHOLD GOODS AND SERVICES, SOCIAL PROTECTION AND MISCELLANEOUS GOODS AND SERVICES", %

to the previous month

by December of the previous year

by July of the previous year

July

HOUSEHOLD GOODS AND SERVICES

In July this year, the fluctuation range of short-term CPI for goods and services included in the group ranged from **99.8%** (hair dye) to **101.1%** (hairdressing services in men's rooms).

OTHER ITEMS FOR PERSONAL USE

The level of short-term CPI for goods and services of this group in July of this year ranged from **100.0%** (women's bags) to **101.1%** (watch repair).

OTHER SERVICES

Among other services, an increase in prices in July this year was noted for photocopying services (**102.1%**) and funeral services (**100.1%**).

CONTRIBUTION TO THE GROWTH (DECREASE) OF THE CONSOLIDATED CPI OF PRICE CHANGES FOR GOODS AND SERVICES BY COICOP SECTIONS IN RUZ 2018 FOR JULY 2023

The share and contribution of each position (section, group, specific product or service) to the change in the aggregate indicator is estimated taking into account price changes and weights of the position in the structure of household expenditures.

Price index weights are the values involved in the formation of the price index, with the help of which:

- the significance of each specific element in the totality of the observed phenomenon is characterized;
- initially incommensurable primary elements are reduced to a commensurable form;
- consistent aggregation of commensurate elements is carried out for all levels of the applied classification and the total value of the change in prices of the phenomenon under study is found.

Contribution to the change in the consolidated CPI for the month **-0,16 p.p.**

The main constraining factor for the CPI for the month in July this year was the decline in prices in the section "Food and non-alcoholic drinks", which, in turn, is associated with both seasonal price declines in the groups "Vegetables, tubers and legumes", "Cereals" and "Sugar, confectionery and desserts".

CONTRIBUTION TO THE GROWTH OF THE CONSOLIDATED CPI OF PRICE CHANGES FOR GOODS AND SERVICES BY COICOP SECTIONS IN RUZ 2018 FOR JULY 2023, p.p.

About a third of the total increase in the consolidated CPI by December 2022 was provided by price changes for food and non-alcoholic beverages. Their contribution reached **1.09 p.p.**, or **33.1%**. The limiting factor was the reduction in prices in the "Information and Communication" section.

The share of the contribution of rising prices for food products and non-alcoholic beverages in the growth of the composite indicator compared to July last year amounted to about **44.9%**. As in the case of the CPI for January-July of the current year, the lowering factor for the annual CPI was the decline in prices for communication services.
