## **VI. Methodological explanations and metadata of demographic indicators**

In order to form **demographic indicators**, the National Statistics Committee of the Republic of Uzbekistan, the Ministry of Justice and the Ministry of Internal Affairs of the Republic of Uzbekistan integrated the primary database of these organizations through electronic data exchange.

Due to the fact that all the necessary data for the formation of demographic indicators are obtained electronically through integration, a separate form of statistical observation has not been approved.

In order to generate data characterizing demographic indicators, statistical authorities process primary data on natural movement and migration of the population received from other government agencies (from the Ministry of Justice and the Ministry of Internal Affairs of the Republic of Uzbekistan).

Statistics of demographic indicators are formed on the basis of the following data:

- birth certificate records;
- death certificate records;
- records of marriage certificate;
- records of the divorce act;
- statistical registration coupon for the arrival form;
- statistical accounting coupon for the departure sheet.
