### IV. METADATA

When compiling statistical indicators on the Republic of Uzbekistan's foreign trade in goods, the United Nations Standard International Trade Classification (SITC) is used alongside the CN FEA. It allows for analytical grouping of exported and imported goods into 10 major sections. SITC codes are assigned to goods using transition keys between the CN FEA and SITC.

Foreign trade statistics are compiled based on data on foreign trade in goods and services: the initial data for compiling foreign trade statistics are data from cargo customs declarations of the Customs Committee and statistical observations of the National Statistics Committee on goods transferred from residents to non-residents that do not cross the state border and are not included in the customs declaration; statistics on foreign trade services are compiled based on statistical observations.
